Lean Manufacturing Training

## 2019 Product Catalog

The LeanMan LLC 2019 Catalog

1<sup>st</sup> Release Date 01-January-2018

Update March 20, 2019

Prices displayed subject to change

Please refer to the LeanMan LLC web site

[www.TheLeanMan.com](http://www.TheLeanMan.com) for current prices.

**The LeanMan**

**Lean Manufacturing Training**

- ✓ Hands-on learning for your organization
- ✓ Reusable kits and training materials
- ✓ Consistent and repeatable metrics
- ✓ Learn – Do – Teach environment

*What can The LeanMan do for your business?*

***It's easy to get started implementing Lean into your company!***

Each Deluxe Car Factory Kit includes the executive overview "*Learning-to-See-the-Waste.*" The event can be completed in under one hour and is a perfect way to start your lean journey. The event includes facilitator's talking points to make execution a snap, while the instruction placemats take the worry out of the event for the first-time simulation participants. It's fun and it packs a real WOW lean punch!

***You will be in good company!***

Companies, colleges and consultants around the world have chosen **The LeanMan** for their Lean Principles training tools. See the listing *In Good Company* at the end of the catalog for a list of just a few of the members who have joined the team.

The hands-on simulation kits contain event scenarios that can be completed in under one hour for executive overview, or the simulation can be configured to last for as long a period as needed to fully explore the elements of lean.

*It's the perfect way to start your lean journey!*

***Fundamentals of Simulation Training***

The American Society for Training and Development (ASTD) recommends using a multi-sensory approach to teaching adult learners.

Adults by nature do not like to read operators manuals, watch instructional videos, or listen to lectures on what to do. They like to learn by doing, they like to become an expert, and then best of all they like to teach others what they know.

Adult learning isn't a simple act. It involves a complex, interrelated series of cognitive processes, including attention, perception, and memory. Based on cognitive psychology—the science of how

Why Simulation Works

## 2019 Product Catalog

people process information—the principles of instructional design can help create and present Lean Mfg. training materials that are consistent with the way people learn.

The LeanMan Lean Principles Simulation Kits will provide you with an interactive Learn-Do-Teach hands-on tool to help introduce you and your team to these learning principles, and suggest how you can combine effective instructional design with the power of simulation to create Lean training materials that work, on the job and in the classroom. And most important, adults establish long term learning when associated with a high state of emotion or exhilaration -i.e. **FUN!**

### **The Value of Training**

Training costs a few bucks, but as the *Three Greeks* cartoon suggests, payback comes quickly.

Motorola calculates that for every \$1 spent on training, there is a \$30 productivity gain within three years *Ronald Henkoff, "Companies That Train Best," Fortune (March 22, 1993).*

A study by the National Center on Educational Quality of the Workforce at The University of Pennsylvania found that a dollar invested by a company in education was more than twice as effective in boosting the firm's productivity as a dollar invested in new machinery. *Washington Post (December 29, 1996).*

Across a variety of business operations, the potential for workforce productivity gains is tremendous. Driving even a 5 percent improvement in productivity can result in substantial bottom-line improvements. *Paul Sparta, Workforce Performance Solutions (June 2005)*

### **Why not Legos?**

Lego blocks have been the simulation selection of choice by many trainers because they are readily available, inexpensive (if you don't consider the Escalade needed to cart them around) and they do a quick job getting the basics of the lean flow across.

So, what do they miss? Anyone who has spent any actual time in the shop with hands-on assembly of product knows that not all parts are created equal (except Legos) and that the randomness and variation in the components fit and finish present a challenge to the idealistic flow.

The LeanMan simulation products are designed to provide some natural size variation like the wooden pegs, or finger-fighters like the small stackable metal parts; plus, some intentional variation for measuring the effects of nonconformance on quality like inserting the black wheels into the flow. The resultant metrics are realistic, statistically repeatable from team to team, and add an element of finesse to the event missed by the overly simplistic Legos or by trainers who have never worked with their hands in a shop.

## Product Catalog

### The LeanMan Deluxe Car Factory Kit - \$574.46

**Deluxe Kit.** This package contains the materials of the Basic Kit as described below, and adds the simulation exercises and facilitator guides to make training simple with excellent results. There are three simulation scenarios provided in the Deluxe kit.

The Deluxe Kit simulations include the Lean Principles Training Learning to See the Waste – a 2-Step Executive level 30-minute simulation with a real WOW factor; the 6-Step TPS simulation, and on the USB Drive a customizable 4-Step “Batch ‘n Queue to Lean Transformation” event. Several Power Point presentations are included and are perfect for introducing executives and others to the value of lean. Each exercise event includes earned value Financial Metrics

This deluxe kit is recommended for first time purchaser and will provide immediate presentation and simulation exercises suitable for all management levels including top management and associates.

#### **Deluxe Package Contents:**

The Deluxe Kit contains over 300 parts, packaged in a durable container with a Polycarbonate cover that latches securely to hold the materials for travel. Approximate dimensions of the kit are 16"x13"x2".

The package includes a Deluxe USB Drive with the PowerPoint files for each simulation event; a set of 8.5 x 5.5 laminated participant placemats and facilitator guides for the Learning to See the Waste 2-step executive simulation event, including the 10-Second Test and the Earned Value financial metrics laminated sheet; two wet-erase markers for metrics; and a large-digit easy to read stopwatch to time the events. The package also includes the color printed and bound TPS Simulation facilitator guide and 8.5 x 5.5 laminated participant placemat set.

#### **Special Bonus:**

Each Deluxe or Deluxe-Plus USB Drive includes several bonus presentations to make training fully comprehensive, and FUN! Files include 5-S for Lean; The 14 Philosophies behind the Toyota Production System (TPS); the Five Principles of Lean; The Lean Self-Assessment Excel Tool; Visual Control for Lean; and Visual Systems for Lean.

## The LeanMan Basic Car Factory Kit - \$397.65

**Basic Lean Factory Simulation Car Kit** is the base building block for all of our Car Factory simulation kits and makes a great way to expand the capacity of any of the Deluxe or Deluxe-Plus Car Factory products.

The Basic Kit is also a great way to obtain a complete hardware set of materials upon which the more experienced Lean Principles trainer can design and implement his or her own lean principles training plan. In this regard, while the Base Kit does not provide any supporting presentation or supporting simulation exercise materials, it is a very economic method for experienced lean trainers to supplement their own methods.

The Basic Kit is recommended for lean trainers comfortable with the Lean Principles and their own presentation methods who just desire the reusable kit of hands-on car factory materials and are comfortable enough to know how to use them with no instructional or support documentation.

The Base Kit contains 20 plain car bodies, with enough wheels, disk brakes, and axle pegs for assembly. Extra wheels, disks and pegs are included. There are two painted car bodies which can be used to introduce mixed mode production into the work cell. The two additional cars can be used as “moles” to run through the flow to provide throughput metrics, as desired, by the facilitator. There are two ergonomic tools included, one is used to provide an easy peg insertion to prevent discomfort to the fingers and wrist (not really needed, but introduction of ergonomic concepts is part of the 5S safety principles) and a wheel extractor tool used to ease disassembly of the completed cars.

There are 5 sub-assembly holding fixtures used to simulate the batch mode operation and the waste of transport moving items as a batch. There are 5 product kit bags used to pick car kits for delivery from the stockroom, plus the yellow plastic box containers are used both in batch mode for material movement and in lean mode for point of use material Kanban containers. A large digit stopwatch for timing events completes the kit.

### **Basic Package Contents:**

The Basic Kit contains over 300 parts, packaged in a durable container with a Polycarbonate cover that latches securely to hold the materials for travel. Approximate dimensions of the kit are 16"x13"x2".

**Please Note:** This Base Kit does not include any of the MS PowerPoint presentation or simulation scenario materials designed for use with the Car Factory. It includes only the toy car materials and stopwatch.

## 2019 Product Catalog

### The LeanMan Companion Car Factory Kit - \$435.57

**Companion Lean Factory Simulation Car Kit** builds upon the Basic Car Kit by providing some easy to facilitate Lean Principles training exercises and support material files on an accompanying USB Drive.

The Companion is recommended as an additional kit for those who have purchased the Deluxe Kit and wish to add capacity to the simulation sessions or train multiple teams for a little competitive fun.

#### Companion Package Contents:

The Companion Kit contains over 300 parts, packaged in a durable container with a Polycarbonate cover that latches securely to hold the materials for travel. Approximate dimensions of the kit are 16"x13"x2". The package includes a Companion USB Drive with the PowerPoint files for each simulation event; a set of 5.5 x 8.5 laminated participant placemats for the Learning to See the Waste 2-step executive simulation event; a wet-erase marker for metrics; and a large-digit easy to read stopwatch to time the events.

### The LeanMan Deluxe Double Car Factory Package - \$919.00

**Double Deluxe.** This special offer package includes the Deluxe Car Factory Kit and The Companion Car Factory Kit at a reduced price, saving you over \$100.00. The Deluxe Double is perfect for larger groups of participants where running two teams is an excellent way to stimulate learning with a bit of competitive fun and comparison metrics.

#### Double-Deluxe Package Contents:

The Deluxe Kit and The Companion Kit each contain over 300 parts, packaged in two durable containers with a Polycarbonate covers that latch securely to hold the materials for travel. Approximate dimensions of the kits are 16"x13"x2".

The **Deluxe Car Kit** package includes a Deluxe USB Drive with the PowerPoint files for each simulation event plus several bonus files; a set of 8.5 x 5.5 laminated participant placemats and facilitator guides for the Learning to See the Waste 2-step executive simulation event and the TPS 6-step guide and placemat set, including the 10-Second Test and the Earned Value financial metrics laminated sheet; two wet-erase markers for metrics; and a bonus large-digit easy to read stopwatch to time the events. The **Companion Car Kit** package includes a the 2-Step LTSTW 8.5 x 5.5 laminated participant placemat set and a bonus TPS Laminated placemat set.

## 2019 Product Catalog

### The LeanMan Deluxe-Plus VSM (Value Stream) Package - \$1,215.95

**Deluxe-PLUS VSM.** The greatest lesson to be learned from the VSM simulation is that not all change is lean and not all lean changes will result in lean flow. Unless you keep an eye on the whole value stream, you may end up with isolated islands of perfection (work cells) linked by systems that are optimized for their own self-interest (goals optimized for purchasing, receiving, stockroom, inspection, etc.) without concern for your “island’s” needs. Value stream mapping is essential to prevent such unwanted and wasteful results.

The LeanMan Deluxe-PLUS VSM Loop Simulation is a complete Lean Principles training package. Containing all the materials and presentations of the Deluxe Kit, the VSM package includes materials to map the value stream flow and to explore the tools of continuous improvement along the way.

The continuous loop VSM simulation training exercises allow the class room training period to run for as long as the facilitator requires, exploring thoroughly all elements of the Five Principles of Lean at each process point in the stream.

#### **VSM Package Contents:**

The LeanMan Deluxe-PLUS VSM package includes all of car factory materials and presentations as in a Deluxe Lean Factory Car Kit and a Companion Car Factory Kit, but all packaged into a single container plus additional materials needed to simulate the entire value stream.

The package also includes the VSM material set of 6 Kanban flags, 8 Non-conforming Material Report cards, 8 Material Requisition cards, 8 Job Ticket cards, 8 Heijunka cards (all cards are laminated) and a supply of wet-erase markers to set limits and record metrics.

The car factory simulation materials are all packaged into a single double deep container approximately 16x13x4, or about the size of a briefcase, for easy transport and setup when traveling on the road, or even when just traveling between training sessions.

## The LeanMan Deluxe-Plus Kanban Package - \$875.95

**Deluxe-PLUS KANBAN.** This simulation is a complete Lean Principles training package. In addition to the materials and presentations of the Deluxe Kit, the package includes materials to create a full customer-pull value stream flow and to explore the tools and communication techniques of Kanban along the way. The addition of the Kanban kit supplies the extra materials needed to turn your Deluxe kit into a fully integrated customer-driven value stream "from customer to factory to supplier."

This simulation training will help participants understand how lean philosophy and techniques can be applied in a totally random mixed-mode customer-pull product flow utilizing Kanban cards and other Kanban signaling devices to control flow and inventory levels.

The event is the Zoom-Zoom Car Factory and Showroom. Customers take delivery from the Show Room at random, which triggers stock replacement from the factory Warehouse, which then triggers the Planning Dept. to order a replenishment from the Factory, which in turn causes a duplicate car to flow back into the Show Room. Along the way, various Kanban methods are employed.

### **Kanban Package Contents:**

The Deluxe-Plus Kanban material kit consists of the complete contents of the Deluxe Car Factory Kit, plus the materials needed to support the Kanban Customer-Pull mixed-model loop simulation.

The whole package fits into one double-deep approximately 16x13x4 container, which holds the USB Drive and facilitator guides and participant placemat sets for The Learning to See the Waste; The TPS Simulation; and the Kanban Simulation exercises.

This Deluxe-Plus Kanban package also includes an 11x14 laminated inventory supermarket slideboard. Kanban Cards include 16 Kanban Production cards, 16 Move/Job Ticket cards, 8 Material Requisition Cards and 8 Non-Conforming Quality Cards.

## 2019 Product Catalog

### The LeanMan Deluxe-*Plus* Heijunka Package – \$885.30

**Deluxe-*Plus* Heijunka.** "HI-E-JUNE-CA"-- The "Leveling the Waves" presentation presents an alternate way to approach the function of master scheduling and planning for a lean manufacturing environment.

The LeanMan Deluxe-*PLUS* Heijunka Simulation is a complete Lean Principles training package. It includes a unique 6 x 6 slot Heijunka Box (14"x15"x4") when assembled) plus all of the materials necessary to explore thoroughly all of the elements of Heijunka scheduling and how it relates to the Five Principles of Lean.

Recommended class size is at least 10 hands-on participants, but varies with the flow method being simulated. There are two Heijunka flow simulations provided. The facilitator is then encouraged to build upon these examples by using the techniques described in the Leveling the Waves presentation and in the Facilitators Guide to run a third simulation using a toss of a die to randomly build one of 6 models.

#### **Heijunka Package Contents:**

The Deluxe-*Plus* Heijunka material consists of the complete contents of the Deluxe Car Factory Kit, plus the extra materials to support the Heijunka mixed-model loop simulation.

Additional Heijunka materials include the 49-page color printed and bound Facilitator Guide, a 6x6 Heijunka Box, 16 Heijunka Kanban cards, 16 Job Ticket order cards, two 450 pc dispenser packs of detail components, inventory gravity fed slide board, and all supporting files on USB Drive.

All materials are packaged in a single double deep container approximately 16x13x4, or about the size of a brief case, for easy transport and setup. The Heijunka Box can be assembled in under 5 minutes.

## 2019 Product Catalog

### The LeanMan VSM Upgrade - \$655.95

**VSM Upgrade** for your Deluxe Car Factory Kit, or any Deluxe-PLUS Package, to include the VSM Value Stream Simulation. This simulation training will help participants understand how lean philosophy and techniques can be applied to maximize customer value, minimize waste, and reduce costs through workplace organization and visual controls, one-piece flow, quality at the source, and pull scheduling.

#### **VSM Upgrade Package Contents:**

Upgrade includes a Companion Car Factory Kit, the VSM Presentation materials on USB Drive and the color printed and bound Facilitator guide and placemat set, and the VSM Kanban control hardware items.

**Note:** Duplicate materials between the Deluxe package and the VSM package are not included. This upgrade in conjunction with a Deluxe Kit will equal a full Deluxe-PLUS VSM Training Package.

### The LeanMan Kanban Upgrade \$326.95

**Kanban Upgrade** for your Deluxe Car Factory Kit, or any Deluxe-PLUS Package, to include the LM Kanban Simulation.

The upgrade kit supplies the additional materials to turn your Car Factory Trainer kit into a fully integrated customer-driven value stream from customer to factory to supplier.

This simulation training will help participants understand how lean philosophy and techniques can be applied in a customer-pull product flow utilizing Kanban cards, signaling devices and Heijunka planning to control flow and inventory levels.

#### **Kanban Upgrade Package Contents:**

Upgrade includes the VSM Presentation materials on USB Drive and a color printed and bound Kanban Facilitator guide and placemat set, plus the VSM Kanban control hardware items. All materials are packaged in a single deep container approximately 16x13x2, or about the size of a thin brief case, for easy transport and setup.

**Note:** Duplicate materials between the Deluxe package and the Kanban package are not included. This upgrade in conjunction with a Deluxe Kit will equal a full Deluxe-PLUS Kanban Training Package.

2019 Product Catalog

The LeanMan Heijunka Upgrade -  
\$337.95

**Heijunka Upgrade** for your Deluxe Car Factory Kit, or any Deluxe-PLUS Package, to include the Heijunka Simulation.

The simulation training will help participants understand how lean philosophy and techniques can be applied in a mixed-mode product cell to maximize customer value, minimize waste, reduce costs through workplace organization and visual controls, implement one-piece flow, instill quality at the source, and synchronize to customers' needs using pull scheduling.

**Heijunka Upgrade Package Contents:**

Upgrade Heijunka materials include the 49-page color printed and bound Facilitator Guide, a 6x6 Heijunka Box (14"x14"x3"), 16 Heijunka Kanban cards, 16 Job Ticket order cards, two 450 pc dispenser packs of detail components, inventory gravity fed slide board, and all of the supporting files on USB Drive.

All materials are packaged in a single deep container approximately 16x13x2, or about the size of a thin brief case, for easy transport and setup. The Heijunka Box can be assembled in under 5 minutes.

**Note:** Duplicate materials between the Deluxe package and the Heijunka package are not included. This upgrade in conjunction with a Deluxe Kit will equal a full Deluxe-PLUS Heijunka Training Package.

2019 Product Catalog

**The LeanMan Grand Package -  
\$1,888.95**

**The Grand Simulation Package** presents the trainer with a complete complement of Lean training materials all packaged into two easy to travel containers. The Grand includes

- The Deluxe Car Factory Kit,
- Companion Car Factory Kit,
- VSM Upgrade Package,
- Kanban Upgrade Package, and
- Heijunka Upgrade Package.
- Large Group Package Files
- Developing Lean Eyes Files
- Fun with Little's Law files – *new in 2019*
- Solar calculator – *new in 2019*

Together they provide all the necessary materials to completely explore the Lean Manufacturing implementation, with an executive overview and shop level events that range from beginner to advanced.

*Note: The Grand is the #1 selling LeanMan product to Colleges and Universities and Consultants across the world!*

**Grand Package Contents:**

Two Car Factory Kits, the VSM Upgrade, the Kanban Upgrade and the Heijunka Upgrade materials. Packaged into two double-deep containers. Includes Two Stopwatches, four wet-erase markers, a total of 96 Laminated Kanban material control cards, Laminated Participant placemats for each simulation event with Facilitator Guides for each, and a USB Drive with all simulation materials and forms, plus the Special Bonus presentation items that are include in the Deluxe Kit.

2019 Product Catalog

## The LeanMan VSMgt Service & Repair Center Simulation - \$40.95

**Value Stream Management (VSMgt)** concepts are explored with this unique and fun alternative simulation designed to be used with any of your LeanMan Car Factory Kits. The Service and Repair Center simulation is a unique twist on the standard Car Factory simulation exercise. In this learning experiment, pre-assembled cars are returned to the factory for service and repair. The value stream management decisions relate to the door-to-door processes that occur in a service department, with some returns simply requiring a review, some a rebuild, and some require ordering and waiting for replacement parts.

Transform the service and repair department into a smooth lean door-to-door flow utilizing lean principles, while maintaining the turn times and quality demands of the customer.

This simulation exercise is an alternative to the larger and more complex VSM Loop simulation. It uses just one Car Factory kit of materials and presents a value stream for customer service using a door-to-door look at the paperwork forms, decision processes, and hands-on repair of customer returns.

**NOTE:** The VSMgt simulation exercise is a separate purchase from the car factory kits, and will require at least one LeanMan Car Factory Simulation Kit to perform the event.

### **VSMgt Package Contents:**

USB Drive. The disk contains the facilitator guide and suggested room arrangement, participant placemats, customer return forms, work order forms, material requisition forms and more. The forms may be printed and used as is, or easily customized to better represent your specific paperwork scheme.

The USB Drive also contains a MS VISIO file with the graphics used to create the slides which may be used to customize the presentation and placemats to fit your own specific scenario.

*USB Drive is the typical file delivery method unless otherwise requested*

## The LeanMan OPT Factory Simulation Game - \$389.95

**OPT – Optimized Production Technology.** The OPT Factory Simulation Dice Game explores the variables that influence production outcomes. A great introduction tool for new production supervisors, managers, and product planners, or anyone working in a production environment. This 8- hour course is also an excellent teaching tool for industrial training course work.

There are 14 scenarios presented in either 2 four-hour Half Day events, or 1 eight-hour Full Day event. The game can be played with 8 to 12 participants. Three additional participants can be added with the extra chips and dice included.

The game consists of two types of dice, each representing yield variables; 50 white chips to “wet” the line; 50 black poker chips, and 100 poker chips of a different color to act as product and to indicate lead time. Laminated cards for operation number are included along with wet erase markers to write the participants name. Tape is provided to attach the laminated card holders to the table edge so other participants can see where each operation is being performed. A large digit calculator is provided for metrics.

A USB Drive containing several files for set up, for QUILS metrics recording, and a 108 slide Power Point presentation for the participants to follow along with the facilitator as the game progresses.

A printed and bound facilitator guide that provides detailed instructions for sequencing and facilitating the games, plus several discussion point questions to ask the participants for each of the 14 steps. Also, included on the USB Drive is a *“Train-the-Trainer”* Excel file to simulate each of the games to provide an easy way to learn how to move product, keep score, and to teach the trainer the concepts of each of the 14 game steps.

An excel file on the USB Drive is used for automatically calculating the metrics using the QUILS concept. Quils stands for **Q**uality, **U**nit cost, **I**nventory, **L**eadtime and **S**hip performance.

### **OPT Package Contents:**

The OPT Factory Simulation Kit contains 2 types of dice, 50 white and 50 black poker chips “wet” the line and 100 poker chips of another color to run through the process. A chip holder helps supports the “finished goods” step. A large digit solar calculator helps with metrics.

A printed and bound facilitator guide provides concise instructions for the trainer, and a USB Drive with Power Point slides for the participants to discuss the concepts. The Game USB Drive, the Facilitators Guide and all supporting items are contained inside the game case for easy storage.

It is all packaged in a durable 16x13x2 container with a Polycarbonate cover that latches securely to hold the materials for travel.

## Team Development

### The LeanMan Teaming with Success Training Package- \$49.95

Teaming with Success Training is a behavioral science based approach to understanding teams and team membership, the effect of introducing a change such as lean manufacturing into a team, and how to lead the team through the resultant turmoil back into a highly productive state.

One of the reasons lean implementation efforts fail in the early stages is the lack of understanding of human behavior in a team setting. Some of the most obvious improvements in product flow are rejected by the team leaving supervisors to wonder why. They often attribute the cause to poor attitude and lack of team spirit. A misstep by the lean trainer to elicit cooperation can backfire and cause long term damage to the team.

Lean leadership is an essential element for creating lasting and rewarding lean results. While the lean principles are not particularly hard to understand, they are not a natural way for teams to evolve. As such, the introduction of lean methods into a team creates an uncomfortable feeling in the early stages. Early warning signs of turmoil are often misinterpreted and attributed to personalities on the team. A lean leader must correctly interpret these warning signs, and carefully lead the team to success.

Teaming with Success is based on the behavioral science of team dynamics and will acquaint your lean leader with the essentials necessary to support a successful lean implementation plan. A few of the subject elements presented in Teaming with Success are: Selective Perception; Communication: verbal and visual; Team Membership; Barriers to Success; The Team Model; and The Trust Equation.

#### **Teaming with Success Package Contents:**

One Teaming with Success USB Drive, one 43-page color printed and bound Facilitator Instruction, and one sample Teaming with Success Training Guide Handbook.

## 2019 Product Catalog

### The LeanMan Developing Lean Eyes Training Package- \$99.95

The Developing Lean Eyes presentation is based on the Gestalt theory of group communication where "Learning to See What You Need To See" considers the various bits of educational bias and environment influence each member of a team brings to the group, and teaches each to look at the work environment with a new set of eyes.

This presentation and exercise set reviews the Gestalt theories and how people communicate with each other verbally and non-verbally. It also teaches the advantage to a lean team when communication evolves to a high speed nonverbal level. It is aimed at answering questions about why team members are resistant to change and the gut level feelings that can defeat even the best of intentions. It helps develop an understanding of language, culture and communication issues that are barriers to team success, and shows team members how to learn to see the waste with a new perspective.

The Lean Eyes presentation ends with a lead-in to the Learning to See the Waste two-step hands-on Car Factory simulation exercise. This exercise, facilitators guide and participant placemats are provided with each Car Factory Simulation Kit, purchased separately. The Car Factory Simulation event is not necessary to gain the full impact of this training package.

#### **Developing Lean Eyes Package Contents:**

One Developing Lean Eyes USB Drive, which includes the Teaming with Success files. One 43-page color printed and bound Teaming with Success Facilitator Instruction. One set laminated Developing Lean Eyes communication exercise facilitator cards. One sample of each Developing Lean Eyes and Teaming with Success Training Guide Handbooks.

**NOTE: This presentation set is now included as part of the 2019 Grand Simulation Package (files only).**

## 2019 Product Catalog

### The LeanMan 5-S Game - \$49.95

This is the same **5S Game** included with the LeanMan 5S Simulation and Game Set Product. Now you can purchase the games separately if you are already practicing 5S and are looking for a clever way to refresh and support the 5th S -Sustain.

The Jeopardy-like game with 25 questions and the Who Wants to Be a Millionaire-like game with 15 questions challenges the skills while reinforcing the underlying elements of the 5S Philosophy.

This "easy to digest" format is designed as a memory trainer for the terms and definitions of 5S. The goal is for participants to come away with a clear distinction between the principles and the terms used when discussing the 5S methods. Participants are given a slide show presentation of the terms and definitions with key words underlined which are used later to answer the game questions. Facilitators familiar 5S can use the slideshow to discuss the key philosophies of the System. Facilitators unfamiliar with 5S will still find it easy to follow along with the slideshow using the materials given.

The games use the training information provided in the LeanMan 5S Simulation Training Kit PowerPoint presentation to create the "5S Jeopardy" and "Who Wants to Learn Lean - 5S" fun filled games. The games are certain to put the team members through their paces as they test their knowledge about the 5S philosophies. The "Who Wants to be a Millionaire" game makes good use of sound, just like the TV show.

#### **5-S Game on USB Drive Contents:**

One 5S Game Set USB Drive

**Please Note:** Product ships USPS Priority Mail flat rate when purchased alone.

*USB Drive is the typical file delivery method unless otherwise requested*

2019 Product Catalog

## The LeanMan ToyodaWay Game - \$29.95

The **ToyodaWay Game Set** USB Drive is a fun spin-off of key information presented in Jeffrey K. Liker's book - *The Toyota Way* (McGraw-Hill 2004). It is a fun way to present the philosophies of the Toyoda family that are the foundation for the Toyota Production System and Lean Manufacturing.

The Jeopardy-like game with 25 questions and the Who Wants to Be a Millionaire-like game with 15 questions challenges the skills while reinforcing the underlying elements of the TPS Philosophy.

This "easy to digest" format is designed as a memory trainer for the ideas and foundations of Lean Manufacturing. The goal is for participants to come away with a clear distinction between the principles and the terms used when discussing the five principles of lean. Participants are given a slide show presentation of the terms and definitions with key words underlined which are used later to answer the game questions. Facilitators familiar TPS can use the slideshow to discuss the key philosophies of the System. Facilitators unfamiliar with TPS will still find it easy to follow along with the slideshow using the materials given.

The games are based on the information provided in the LeanMan TPS Simulation event, which is part of the Deluxe Car Factory Simulation Training Package, and used to create the "ToyodaWay Jeopardy" and "Who Wants to Learn Lean - The ToyodaWay" fun filled games. The games are certain to put the team members through their paces as they test their knowledge about the lean philosophies. The "Who Wants to be a Millionaire" game makes good use of sound, just like the TV show.

### **ToyodaWay Game Contents:**

One ToyodaWay Game Set USB Drive

**Please Note:** Product ships USPS Priority Mail flat rate when purchased alone.

*USB Drive is the typical file delivery method unless otherwise requested*

## Simulation Support

### The LeanMan 5-S Philosophy Handbook- \$20.00

The **5S Philosophy Handbook** is a guide book for participants of the LeanMan 5S Training Simulation to use to follow the presentation and discussions during the simulation event. The booklet also makes a fine reference for participants to keep and use at their work station as they practice the 5S activities each day.

This handy user reference book discusses in detail the 5S concepts, tools and strategies for workspace organization. The contents of the 5S Philosophy Handbook follow closely the 5S Simulation Training Simulation Kit's 5S Review presentation; the 5S Refresher slide show; and the two LeanMan 5S Games which are included on the 5S Simulation Training Kit USB Drive. One copy of the handbook is included with the 5-S Simulation and Game Set.

**Please Note:** Due to printing lead time, large quantities of Handbooks may require up to 10 days to process and may be delivered in a separate shipment when ordered with other LeanMan products. This will not increase shipping cost to you.

#### **5-S Handbook Package Contents:**

The 80-page color laser printed booklet (printed double sided on photo gloss heavy duty paper) is 8.5" x 5.5" with a 10-mil clear cover and 16-mil leatherette backing. The handbook is coil bound so the pages lay flat for ease of use.

2019 Product Catalog

**The LeanMan Developing Lean Eyes Handbook- \$20.00**

The **Developing Lean Eyes Handbook** is a guide book designed for participants of the LeanMan Developing Lean Eyes Training Package to use during the event to follow the presentation and discussions, or to keep and use at their work station as a reference guide.

This handy reference book discusses in detail the Lean Visual Communication concepts, waste identification tools and strategies for team member acceptance of lean principals.

The contents of the Developing Lean Eyes Handbook follow closely the LeanMan Developing Lean Eyes Training package PowerPoint presentation are included on the Training Package USB Drive.

**Please Note:** Due to printing lead time, large quantities of Handbooks may require up to 10 days to process and may be delivered in a separate shipment when ordered with other LeanMan products. This will not increase shipping cost to you.

**Lean Eyes Package Contents:**

The 54-page color laser printed booklet (printed double sided on photo gloss heavy duty paper) is 8.5" x 5.5" with a 10-mil clear cover and 16-mil leatherette backing. The handbook is coil bound so the pages lay flat for ease of use.

2019 Product Catalog

**The LeanMan Teaming with Success Handbook- \$20.00**

The **Teaming with Success Handbook** is a guide book for participants of the LeanMan Teaming with Success Training Package. It is intended to be used by participants to use during the event to follow the presentation and discussions. It also makes a handy reference to distribute to participants to keep and use at their work station as they put their training into practice.

This handy reference book discusses in detail the Lean Leadership concepts, tools and strategies for team member communication and building trust.

The contents of the Teaming with Success Handbook follow closely the LeanMan Teaming with Success Training package PowerPoint presentation are included on the Training Package USB Drive.

**Please Note:** Due to printing lead time, large quantities of Handbooks may require up to 10 days to process and may be delivered in a separate shipment when ordered with other LeanMan products. This will not increase shipping cost to you.

**Teaming Package Contents:**

The 45-page color laser printed booklet (printed double sided on photo gloss heavy duty paper) is 8.5" x 5.5" with a 10-mil clear cover and 16-mil leatherette backing. The handbook is coil bound so the pages lay flat for ease of use.

2019 Product Catalog

**The LeanMan Learning to See the Waste Handbook- \$20.00**

The **Learning to See the Waste Handbook** is a companion guide book for participants of the Car Factory Simulation Training Package. The intent is to use it during the event and during the follow-up Continuous Improvement and Kaizen discussions held after the event. Facilitators may choose to distribute the handbooks to each participant to keep and use at their work station as a reference guide for reducing waste in their work processes.

This handy reference book discusses in detail the Lean concepts of waste; presents two powerful waste identification tools with instructions on how to use them; and discusses additional strategies for team members to reduce or eliminate waste from their daily processes.

The contents of the Learning to See the Waste Handbook follow closely the Lean Principles Training PowerPoint presentations associated with any of the Deluxe or Deluxe-PLUS Car Factory Simulation Packages.

**Please Note:** Due to printing lead time, large quantities of Handbooks may require up to 10 days to process and may be delivered in a separate shipment when ordered with other LeanMan products. This will not increase shipping cost to you.

**LTSTW Package Contents:**

The 45-page color laser printed booklet (printed double sided on photo gloss heavy duty paper) is 8.5" x 5.5" with a 10-mil clear cover and 16-mil leatherette backing. The handbook is coil bound so the pages lay flat for ease of use.

## Replenishment Supplies

### The LeanMan 8-Wastes NVA Activity Wallet Cards (50 pack) - \$29.00

**8-Wastes Wallet Cards** help in identifying and then eliminating the 8 wastes are the keys to workplace productivity. These handy wallet-size cards are great to keep with you as a reminder of the 8 Wastes.

The 2 x 3 1/2 inch cards are double-sided color laser printed on premium heavyweight gloss stock. Sold in package of 50 cards.

**8-Wastes Card Package Contents:**  
Ships as a set of 50 cards.

### The LeanMan 5-S Philosophy Wallet Cards (50 pack) - \$29.00

**5-S Philosophy Cards** provide the keys to workplace safety, organization and housekeeping. These handy wallet-size cards are great to keep with you as a reminder of the 5S's. Each card provides the definitions and essence of each S.

The 2 x 3 1/2 inch cards are double-sided color laser printed on premium heavyweight gloss stock. Sold in package of 50 cards.

**5-S Card Package Contents:**  
Ships as a set of 50 cards.

## Expansion Products

### Large Group Simulation Package - \$49.95

The LeanMan **Large Group Package** is an upgrade for any Deluxe or Deluxe-*Plus* kit. The 4-step simulation is designed to train large, but variable sized, groups of participants in the four main flow methods.

The Evolution of Lean presentation (available on the Deluxe USB Drive) begins the event and a few additional presentation materials such as Learning to See the Waste are also recommended, but will require additional time for the event.

The Large Group Simulation package includes a printed and bound color 84-page facilitator guide which provides lists of things to observe and point out to the people, comments to add for clarity, and suggestions for improvement.

#### Large Group Simulation Parameters:

This simulation is designed to operate with variable sized groups of participants using up to 3 Car Factory Kits of material, and can be adjusted as needed to accommodate from 5 people to 39 people. Simulation is limited to 10 sets of car material when a single kit is shared between two teams. Adding a disassembly person as the Customer can alleviate some of this limitation as materials can be put back into the stockroom from the delivered cars. This may be recommended for the Demand-Pull simulation events where material moves at a higher production velocity

The 5 main process points are Stockroom, Subassembly, Final Assembly, Inspection, and Finished Goods. Conveyance is an option if there is space in the training room to place the process points at some distance from each other. This distance spacing is highly recommended because it more accurately simulates a real production shop. The Detail Department is optional, increasing the minimum participant count to 6 people per team if used.

**Please Note:** This presentation event is available for purchase only to clients who also purchase (or have purchased in the past) at least one Deluxe Car Factory Kit. Basic Kits make excellent add on kits.

**NOTE:** This presentation set is now included as part of the 2019 Grand Simulation Package (files only).

#### Large Group Package Contents:

Materials include the 84-page color printed and bound Facilitator Guide, two 450 pc dispenser packs each of Red and Yellow detail components (Head and Tail Lights for the cars), and all supporting files on USB Drive.

## 2019 Product Catalog

### Fun with Little's Law - \$19.95

The LeanMan **Fun with Little's Law** contains several PowerPoint presentations which explain the definitions of Little's Law; provide several relevant examples to operations and finance; and suggest how to use the law to create metrics for the LeanMan Car Factory simulation exercises. Examples are included for the Learning to See the Waste and the Heijunka simulation exercises.

**Little's Law Relationships** provides the background of the mathematical relationship between Throughput, Inventory and Cycle Time.

**Little's Law Laundry** provides an interesting application of the laws in setting up a small business adventure - a laundry service.

**Little's Law and Process Improvement** provides an analytical approach to the LeanMan Car Factory 2-step simulation exercise where the relationships of Throughput, Inventory and Cycle Time are used to improve flow.

**Heijunka and the Box** looks at the queuing formula and the Heijunka process in a mixed mode operation.

**Little's Law Financial Metrics** applies the law to the finance side of business, with ROAR Industries annual financial statement as a basis for an analytical consideration of the business performance.

**NOTE: This presentation set is now included as part of the 2019 Grand Simulation Package (files only).**

#### **Little's Law Package Contents:**

All PowerPoint files are delivered on a USB Drive.

## 2019 Product Catalog

### Learning to See the Waste Participant Placemat Set - \$19.95

**BEFORE YOU BUY THIS PRODUCT** - A set of these placemats are included with all Companion, Deluxe and Deluxe-PLUS Kits. The standard simulation is for 8 people running 10 minutes per exercise with 20 cars.

These extra sets of the laminated Learning to See the Waste Participant Placemats can be used with a single Car Factory kit to run 5 minute exercises with 10 cars, using two teams of 8 participants. Or with a second Card Factory Kit to run two full teams in parallel for extra fun and comparison metrics. This is the perfect way to double up the executive level simulation exercises with large groups using a single Car Factory Kit. (Set includes the laminated materials only - no presentation or USB Drive)

Since the Learning to See the Waste presentation is intended as an introduction to Lean Principles exercise, it most often is given to upper level managers, marketing managers, customers and supply chain professionals, and very often in large group settings of 50 or more. The Learning to See the Waste Participant Placemat Set provides the extra instruction placemats needed to perform this multi-team simulation.

The Learning to See the Waste Participant Set consists of laminated 8.5 x 5.5 double sided placemats which include the simulation instructions for each participant. Batch 'n Queue on one side, Lean Flow on the other.

**Please Note:** The USB Drive containing the PowerPoint presentation detailing the full Learning to See the Waste concepts and lean principles is included with either the Deluxe or Deluxe-PLUS Kits.

#### **LTSTW Laminates Package Contents:**

Laminated 8.5 x 5.5 double-sided instruction placemats for the two-step Batch 'n Queue and the Lean Flow simulations.

### 2019 Product Catalog

## Spanish Upgrade Package - Deluxe

**\$215.95**

Spanish Upgrade Package - Deluxe provides all the presentation software and printed simulation materials that are included in the standard Deluxe Car Factory Kit Package.

### Package Contents:

The Spanish Language software upgrade is provided on a USB drive. The printed and bound Spanish LTSTW and TPS Handbooks are included as well as the Spanish laminated 2-step LTSTW and 5-step TPS simulation participant placemat sets.

In addition, the several free Bonus presentations found on the standard Deluxe Car Factory Kit USB Drive are also translated into Spanish and provided with this Spanish Upgrade Package.

## Spanish 8-Waste NVA Activity Wallet Cards (50 pack)

**\$29.00**

The Spanish 8-Wastes NVA Activity Wallet Cards (50 pack) are great to keep the team engaged with this reminder of the 8-Wastes.

### Package Contents:

Ships as a set of 50 cards.

 TPS Simulation Placemat Set - 5-Step

**Package Contents:**

Laminated 8.5 x 5.5 double-sided instruction placemats for the five-step TPS Lean Flow simulations.

## History of Lean Events

The Lean Factory Simulation begins with the Batch 'n Queue method based on Adam Smith's division of labor principles. These were later solidified by Frederic W. Taylor and presented in his 1911 book "The Principles of Scientific Management" (New York: Harper & Brothers). Taylor's methods became the bedrock for production flows around the world. This batch process is nicely presented in the New Manufacturing Challenge: Techniques for Continuous Improvement by Kiyoshi Suzaki (The Free Press, 1987), and it is Suzaki's model that becomes the first simulation event. (The Deluxe Kit provides all this history and more in greater detail in the Power Point training presentation included on USB Drive)

The simulations then progress through the techniques of one-piece cellular flow, continuous flow with Kanban signals, ending with a lean flow using a pull system. Along the way, additional lean concepts are layered onto each event, such as Value Stream Mapping, learning to see waste with the NVA test, and more. There are four main flow concepts presented, with four variations of each type described in the kit, plus many suggestions for training the workers to think lean. Please see the Suggested Training Syllabus on the References tab.

Key learning objectives of the simulation

- Understanding Lean concepts of one-piece flow, pull systems, inventory reduction, and more
- How production flow has followed batch 'n queue over the last 100 years, and why change is needed
- How to see where waste and inefficiency exists in each type of flow
- How line imbalance and inventory stockpiles affect the customer
- How to see the whole value stream
- How to optimize the efficiency of the whole stream versus the efficiency of the individual process
- How to identify Value Adding and Non-Value Adding activities
- How to seek continuous improvement, one step at a time
- How to Think Lean

## The need for Lean Principles Training

The Evolution of Lean presentation is included with each Deluxe level training product. It is a historical approach to understanding lean principles and modern theory of operations management. The purpose of this presentation is to lay the foundation for understanding why offices, factories and in fact any group of people in business together operate the way they do, and why the application of the lean concepts is so important in today's time-based competitive global economy.

## 2019 Product Catalog

Success or failure of your lean journey depends upon how well the team buys into the concepts, and the lean leadership that is provided to them. Most groups operate in the traditional "functional separation" mode based on a century old concept that says the best way to manage the big organization is to break it into small functional organizations, and if each small functional group then optimizes for its own best goal that somehow by default the big organization would be optimized. Wrong!

Lean principles training helps us to see the value stream that flows through and between each of the small groups and to help us set goals that will optimize the value for the entire organization. The Evolution of Lean presentation lays the path from traditional batch 'n queue methods of the twentieth century to the lean flow of today.

The concepts presented relate directly to the Lean Factory Simulation Kit training guide and provides the team with the ability to test out the theories before taking them to the shop.

### A Bit of History

At the turn of the last century companies were mainly mom and pop shops where products were craftsman items produced out back by pop while mom did the accounting at the kitchen table. As the business grew the functions of accounting, purchasing and production plus any other needs were handled by people brought in specifically to focus on these special duties.

Typically, they shared a large office space and communication between members was very informal. Collectively they formed the transformation process to take raw inputs into the process and deliver a finished product out to the customer.

Management of these large business models, and more specifically improving their efficiency, became the work of *Frederic W Taylor*.

Taylor saw the business being run as one large transformation problem. Materials and resources were inputs, and products were outputs.

As business grew communication between the functional elements and the owner became strained, efficiencies were lost in the chaos. Taylor began his studies with the manual labor required to perform tasks, and the improvement of labor efficiency by careful study of the component parts of each task element, i.e. movements of the worker.

This eventually led Taylor to publish the discovery of the "*one best way*" process for each type of work task. His principle led to the development of industrial engineering as a career for process design.

As the business continued to grow the special functions became formalized Functional Departments within the transformation process with separate offices and independent managers. Formal communication between the departments became ridged as well with specific information needs placed on forms to be filled out and all documentation requirements to be filed.

## 2019 Product Catalog

Frederic W Taylor’s 1911 Scientific Principles divided the “big business” transformation process into smaller and more easily managed functional departments tasked to design their own “one best way” processes under the skillful eye of trained industrial engineers and managers, and then turn them into formal standards, with each department isolated and operated under independent management, where department *goals are optimized* for each function’s own best interest – even to the detriment of overall company efficiency.

The theory was based on the concept that if each function was optimized for their own greatest efficiency then the whole company must by default become optimized.

These Functional Departments were designed to provide the owner with an element of control over the large business where specific focus could be applied where and when needed, but on a smaller scale the owner could manage one element at a time.

The result of this focus on optimization of each functional element department is a dedicated skill set development within each department, an understanding of standards and processes that can only be performed by members of the select team and therefore limited to the availability of only those people, while others wait for the output.

This *results in long lead times* to produce the overall product of the operation, even when the only value adding step, the one for which the customer is willing to pay, may be buried deep in a stream of non-value adding tasks.

Materials to be passed between the functional departments typically require queues and delays while waiting for the next department to clear the way to receive it, and then perform their function. Most departments have an INPUT queue box to hold requests until they can be processed, and an OUTPUT queue box to hold completed materials or forms waiting for that special person to arrive to pick up and transport the item to the next departments INPUT queue. This is what is referred to as *independent process flow*.

Paperwork forms must be completed, approvals obtained, priorities analyzed, resources assigned, work tasks queued up and eventually the work completed. Let’s visualize the delivery of a spare part requested by a customer, and the functional elements that the process interacts with from order receipt to payment acknowledged. Imagine the formal documentation required between each step in the sequence, the formal forms and approvals, and the queue delays between each activity.

## 2019 Product Catalog

Interactive contact between departments not under direct supervision of the value producing department manager require queue and delay while each interacting department sorts out priority, resource availability, sometimes additional authority and responsibility and then *reaches a mutual agreement* on “when and how.”

The result of this focus on optimization of each functional element department is a dedicated skill set development within each department, an understanding of standards and processes that can only be performed by members of the select team and therefore limited to the availability of only those people, while others wait for the output.

This results in long lead times to produce the overall product of the operation, even when the only value adding step, the one for which the customer is willing to pay, may be buried deep in a stream of non-value adding tasks.

*Value Stream Management* is the process of measuring, understanding, and improving the information flow. The value stream is mapped with all of the individual interactions required of all associated functional departments or tasks that are part of the flow necessary to keep Cost, Service and Quality for a company's products and services as competitive as possible. Then the operation steps are realigned to optimize flow from customer order all the way back to the source of materials, and any operation that can be moved to a background function and out of the way of flow is thus moved, and production velocity and throughput are brought to the forefront of the process to optimize on the customer's needs, not the individual internal departments of the company.

## Simulations

The LeanMan Car Factory Kits include several simulation events which are pre-designed to help you get started training lean principles right out of the box. Several of these simulation events are described in the paragraphs below, and as you will see, the LeanMan Car Factory is a very powerful tool which provides you the ability to create custom training formats tailored to suit your students' specific needs.

Simulation	Group Size	Time	Audience	Steps
<a href="#">Learning to See the Waste</a>	5-8	100 min.	Executives, Supply Chain, Support Depts	2
<a href="#">LM Car Factory Simulation</a>	5-8	100 min.	Mid-Level Management, Shop workers	4
<a href="#">LM Large Group Simulation</a>	5-39	60-150 min.	Large Audiences	2 or 4
<a href="#">TPS Simulation</a>	8-12	110 minutes.	Mid-Level Management, Shop	5
<a href="#">VSM Simulation</a>	11-15	280 min / Continuous Loop	Supply Chain, Mid-Level Mgmt, Purchasing, Planning, Shop	9
<a href="#">LM Heijunka Simulation</a>	8-12	190 minutes	Mid-Level Mgmt, Planning, Shop	3
<a href="#">VSMgt Service &amp; Repair Center</a>	9-12	140 min.	Office and Administration, Supervisors, Shop	3
<a href="#">LM Kanban Simulation</a>	8 to 12	260 minutes	All levels, from executive to shop operator, supply chain.	4
<a href="#">OPT Factory Simulation</a>	12 to 15	8 hours	low to mid level production people	14

### The TPS Car Factory Simulation

The TPS Car Factory Simulation exercises included with the Deluxe and Deluxe-PLUS Package kits are designed to closely mimic the Toyota Production System paper airplane simulation, *but without wasting all that paper!*

The six exercises take you from large batch to lean flow with 2-bin Kanban, plus each exercise ends with an analysis of the 8 wastes and a Financial Chart to calculate earned value - *the bottom line!*

$$\text{EVA} = \text{Sales} - \text{COGS} - \text{Capital Expense}$$

*It's all about learning to see the waste!*

The following charts detail the timing and sequence of each simulation event performed by the LeanMan Simulation products.

## 2019 Product Catalog

### LeanMan Car Factory Simulation – Learning to See the Waste 2-Step Event

100 minutes

<b>LM Car Factory LTS Introduction</b> 30 minutes	 <ul style="list-style-type: none"> <li>Introduction to Lean definitions and waste terms 5 minutes</li> <li>Introduction to the 10-Sec Test and Observations 10 minutes</li> <li>Introduction to the LeanMan Car Factory Kit components 5 minutes</li> <li>Introduction to the two participation events 10 minutes</li> </ul>
<b>Simulation Events 1 &amp; 2</b> 40 minutes	 <ul style="list-style-type: none"> <li>Setup Table with event 1 placemats and kit of materials 5 minutes</li> <li><b>EVENT 1:</b> Batch n' Queue push: Initial build of product following instructions on participant placemats. Record metrics using wet erase marker and stopwatch. [5 participants + observer team] * 10 minutes</li> <li>Reset Table with event 2 placemats and point of use materials 5 minutes</li> <li><b>EVENT 2:</b> 1-piece pull [lean]: Fourth build of product following instructions on participant placemats. Record metrics using wet erase marker and stopwatch. [3 participants + observer team] * 10 minutes</li> <li>Discuss observations and metrics 10 minutes</li> </ul>
<b>Self Study LTS Waste</b> 30 minutes	 <ul style="list-style-type: none"> <li>Introduction to Lean Manufacturing definitions and terms and techniques to observe and eliminate waste in the flow. Self-Study Flash Movie 30 minutes</li> </ul>
<p>* Metric Times are dependent upon technic used. Either fixed time for each event and count completed cars OR allow time for all cars to be completed and measure time per car.</p>

	Group Size	Time	Steps
<b>VSMgt Simulation</b>	9-12	140 min / Continuous Loop	3
<p>Value Stream Management. This event focuses on the process of unpredictable input, demand and management of work when product variation meets customer demand variation. Managing the value chain from customer order to customer delivery requires the creation of a knowledge based team capable of extreme flexibility. ROKA – Return on Knowledge Assets – is in play and creates a challenge for human resource rules and job descriptions.</p> <p>Value Steam Mapping (VSM) is normally associated with the flow of material in a manufacturing company. However, many of the tools and techniques can be applied, with just a little twist, to document the information flow necessary to perform office administration or service industry processes. Office Value Stream (OVS) is the term some practitioners have coined for the series of activities or processes performed while supporting the daily operation needs of the company, and is also known as VSMgt or Value Stream Management when applied to a mix of both office and shop activities.</p> <p>Roles include Customer, Administrator, Evaluator (1 or 2), Repair Tech (1 or 2), Inspector, Stock Keeper (1 or 2), Conveyance (1 or 2), and Accountant.</p> <p>Metrics: <math>\text{Earned Value} = \text{Sales}\\$ - \text{Cost of Goods Sold}\\$ - \text{Capital}\\$</math></p>

<b>VSM Simulation</b>	11-15	280 min / Continuous Loop	9
<p>(Value Stream Map) This 9-step event focuses on each of the nine point processes in the value chain from customer order to customer delivery, one process at a time. Each exercise introduces lean techniques such as Kanban material and visual signal devices, use of target tracking reports, kaizen forms, and continuous improvement metrics. This simulation exercise also provides an excellent basis of understanding for Value Stream Management training for the LEAN office.</p>

### LeanMan Car Factory Simulation – Heijunka 3-Event Simulation

190 minutes

LM Heijunka Introduction 60 minutes	<p>PowerPoint Leveling the Waves 49 slides</p> <p>Introduction to the Heijunka terms, definitions and methods of mixed-mode flow with random customer demand. Standard Work, Visual Management, Takt Time, 1-Pc flow, kanban, EPEI and planning will be presented with interactive discussion. Slides 1 - 28</p> <p>30 minutes</p>	<p>Introduction to the LeanMan Heijunka simulation methods, tools, and organization for running the event. Event 1 is a fixed demand flow. Event 2 is a pseudo-random flow, and optional event 3 is a totally random demand based on the toss of a die. Slides 29-49</p> <p>30 minutes</p>		
	<p>PowerPoint Simulation Placemat Set 20 Slides</p> <p>Setup Table with placemats, heijunka box and kit of materials</p> <p>15 minutes</p>	<p><b>EVENT 1: Stable-Demand:</b> Initial build of product following instructions on participant placemats. Record metrics using wet erase marker and stopwatch. [6 participants + observer team]</p> <p>* 20 minutes</p>	<p>Reset Table materials</p> <p>5 minutes</p>	<p><b>EVENT 2: Random-Demand:</b> Second build of product following instructions on participant placemats. Record metrics using wet erase marker and stopwatch. [6 participants + observer team]</p> <p>* 20 minutes</p>
Simulation Event 3 70 minutes	<p>Discuss observations and metrics considering the difference between stable and random demand, and in particular the flow between operators and the use of the box, Consider improvements the team would like to see.</p> <p>15 minutes</p>	<p>Rearrange tables with suggested changes and customer rolls the die.</p> <p>10 minutes</p>	<p><b>EVENT 3: Random-Demand (roll of the die)</b> Third build of product following instructions on participant placemats. Die determines the model to build. Record metrics using wet erase marker and stopwatch. [6 participants + observer team]</p> <p>* 30 minutes</p>	<p>Discuss observations and metrics difference with true random demand</p> <p>15 minutes</p>

	Group Size	Time	Steps
<b>5S Game</b>	Any size group	90 Minutes	3
<p>The 5S Game is an interactive presentation of the 5S theory, learning the terms and language of 5S, and then playing two games to firmly entrench the 5S definitions and use rules into long term memory. The presentation and games can be played with any size group of people, typically 5 to 20 make up a good size group.</p>			

	Group Size	Time	Steps
<b>5S Simulation</b>	8 to 10	Approx. 5.5 hours	3
<p>The 5S Simulation uses an interactive PowerPoint presentation to present each of the “S” steps in sequence with stops between to practice the step using the kit materials. There are two rounds of building the product, the first is a random build from an unorganized pile and the second is a build after full implementation of the 5S rules.</p>

	Group Size	Time	Steps
<b>OPT – Optimized Production Technology</b>	12	8 Hours	14
<p>The idea behind the OPT Simulation Factory Kit is to provide a complete set of materials that can be used to explore the concepts of production flow. There are 14 steps to the game, in each we will change one or more production variables and test the results for analytical comparison. Variables such as capacity, bottleneck, overtime, batch transfer size, inventory levels and such will be tested and modified in an attempt to balance the line to produce Quality, Unit Cost, Inventory, Lead Time and Ship Performance metrics acceptable to the customer.</p> <p>The materials provided are optimized for 12 participants but can be adjusted by the facilitator to accommodate between 8 and 15 if necessary. The 8-hour event can be split into two 4-hour events.</p> <p>To aid the facilitator before the class, a train-the-trainer Excel file is provided to simulate each of the game steps. The facilitator will toss each type of die and learn how to flow the materials and experience the pitfalls the participants will encounter such that the facilitator will have first-hand knowledge about the situation and be able to answer questions and support the play.</p>			

2019 Product Catalog

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
OPT	Optimized Production Technology [USB Drive provided with the OPT Factory Simulation Game Kit]	<p>Learn the secrets of production flow in this 14 step – 8-hour presentation of each of the variables encountered in the design and flow of product. Using dice to simulate yield and poker chips to simulate product, the participants experience the trials and tribulations of material movement in production.</p> <p>There are 14 steps to the game, in each we will change one or more production variables and test the results for analytical comparison. Variables such as capacity, bottleneck, overtime, batch transfer size, inventory levels and such will be tested and modified in an attempt to balance the line to produce Quality, Unit Cost, Inventory, Lead Time and Ship Performance metrics acceptable to the customer.</p> <p>Metrics are based on the production cost breakdown using depreciation, material cost, total cost, unit cost, lead time and a “M” factor calculation. Inventory will be the initial number used to “wet” the line. The “M” factor will be based on forecast and calculated as Material Cost divided by forecast, and this number will be used for game steps where the outcome does not meet forecast. These metrics will be calculated after each game step and aligned in a side by side comparison chart to track effects and progress as we attempt to create the ultimate efficient production line.</p> <p>To aid the facilitator before the class, a train-the-trainer Excel file is provided to simulate each of the game steps. The facilitator will toss the die and learn how to flow the materials and experience the pitfalls the participants will encounter such that the facilitator will have first-hand knowledge about the situation and be able to answer questions and support the play.</p> <p>This course was developed under the guidance of Eli Goldratt and is an excellent base foundation for understanding the need for Lean Mfg.</p>
Basic communication	LeanMan Teaming with Success Presentation and Hands-On Exercise [Teaming with Success USB Drive and game package, <b>or</b> Developing Lean Eyes USB Drive]	<p>Since lean is all about flow, and rapid communication is the basis of flow, we need to create a level playing field for team members to communicate with each other. That includes overcoming the language, cultural and personal barriers that exist in the team.</p> <p>For lean to be successful, we need to push good decision making as far down into the organization as possible. That means the process operators need to see, hear and understand the aural and visual cues that occur dynamically all day long, and to react correctly and rapidly and instinctively.</p> <p>During the presentation, there are two participant games played to reinforce the communication methods and demonstrate how the barriers to success influence accuracy in communication.</p> <p>A 32 question Teamwork Survey and score sheet is provided to help assess the team’s current stage of development.</p> <p>Following the presentation, the participants perform one of three survival scenario games. These fun adventures teach teamwork and consensus problem solving, both bedrock of lean. They also act as a setting for team members to get to know each other a little better in a fun non-work atmosphere.</p>

## 2019 Product Catalog

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
Visual Communication	Visual Systems for Lean Presentation [Bonus files on the Deluxe Kit <b>or</b> Deluxe Plus Package USB Drive]	<p>Sights and sounds we experience every day can become commonplace to us and take on a background position. We often see and react to situations without even being aware we are doing it.</p> <p>Visual communication takes a closer look at the way everyday information is presented to us and how we interpret and act automatically. Participants gain insight into the mechanism of visual information, and how to create visual instructions that anyone of any language can see and understand.</p>
Visual Understanding	LeanMan Developing Lean Eyes Presentation and Hands-On Exercises [Developing Lean Eyes USB Drive]	<p>Once the verbal and visual communication channels are open, we need to start increasing the speed at which communication takes place. Visual communication is very rapid, and is essential to creating a lean enterprise. A person can instantly and correctly understand a need and an action by a simple look or glance, provided the information is presented adequately. Language becomes less a barrier and team member interaction becomes more intuitive.</p> <p>Sometimes we misinterpret what we see because of our own bias, so we need to understand the false meaning of certain visuals and to develop lean eyes to sort out the real information. This presentation uses the Gestalt theories to explore the tricks are brain plays and how we can improve communication accuracy.</p> <p>The USB Drive contains three alternate presentations which focus on various training needs all related to the ability of the learner to observe and disseminate information.</p>
Seven <b><i>Eight</i></b> Types of Waste	<p>LeanMan Learning to See the Waste [Presentation and simulation is included on the Developing Lean Eyes USB Drive, the Deluxe Kit USB Drive <b>or</b> Deluxe Plus Package USB Drive; and simulation only provided with the Companion Kit]</p> <p>Participants receive a wallet size double-sided card with the eight non-value-adding wastes listed and described as defined by the Toyota Production System. 20 cards pre-printed are included with each Deluxe or Deluxe Plus Kit, and files on the USB Drive allow additional cards to be printed.</p>	<p>Almost everyone learns to perform large tasks in batch mode. As individuals, we learn to be efficient by performing and completing one step of a "process" at a time before advancing to the next step. As team members, we tend to bring this batch-mode bias to the application of all work, and that is a big problem for lean implementation.</p> <p>The Learning to See the Waste Presentation presents the concept of waste that the batch mode creates when teams of people are performing tasks. A tool for finding waste is included with this presentation. Called The 10-Second Test, this handy method teaches the team to observe and see where possible waste may be occurring within any process, and works equally well in office areas, service operations and production shops.</p> <p>The two-step Learning to See the Waste Car Factory Simulation follows the presentation, and is intended to focus on the batch-mode bias problem. The hands-on simulation starts with a batch-mode operation in the toy car factory. As the factory produces cars, the tools we learned in the presentation are applied and we begin to see where waste is occurring in the flow. The factory is then redesigned for lean flow. The participants can see first-hand the differences and begin to see how waste affects flow.</p> <p>Included with the simulation is the LTS Financial Chart which teaches participants to calculate earned value by the formula <math>EVA = Sales - COGS - Capital Charges</math>. This financial metric adds emphasis to the need to eliminate waste in the flow process.</p>

## 2019 Product Catalog

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
Visual Control	Visual Control for Lean [Bonus file on the Deluxe Kit <b>or</b> Deluxe Plus Package USB Drive, or Deluxe Plus Heijunka Package, or the Deluxe Plus Kanban Package]	<p>Now that we are aware of types of visual and aural signals reaching out to us, we need to put them to good use in creating a lean, clean information channel to rapidly convey just the right information and in just the right way throughout the value stream.</p>
Lean Principles	LeanMan The Five Principles of Lean [Bonus file on the Deluxe Kit <b>or</b> Deluxe Plus Package USB Drive]	<p>Before going too much further in our lean journey, it is time to establish some lean thinking with the team. The presentation of the five principles of lean provides some discussion time with the team to help them begin to formulate the big picture.</p> <p>Lean is poorly implemented if confined to only a few point process areas in your enterprise stream.</p>
5S	5-S for Lean Presentation [Bonus file on the Deluxe Kit <b>or</b> Deluxe Plus Package USB Drive]	<p>As stated earlier, lean is all about flow and rapid communication. We learned in Teaming with Success that barriers do exist and they attempt to defeat the daily good communication and decision making we need to succeed with lean.</p> <p>Many of these barriers to success are self-imposed by the way we have designed our workspace, what we have chosen to store there, and how well we have provided for the visual communication channels necessary to transmit and receive information cues between team members.</p> <p>This introductory to 5S presentation provides some fun ways to look at our work space and bring to our attention the clutter and debris that we step over every day and have become so accustomed to it that we don't even see it anymore.</p>
5S Refresher presentation	5S Defined [Support file on the 5S Simulation Training Kit USB Drive and the 5S Game USB Drive]	<p>This presentation presents the definitions contained in the LeanMan Jeopardy game opening slides, and uses verbal narration and sound. Intended as a prerequisite to the LeanMan Who Wants to Learn Lean-5S game. This presentation provides all of the information necessary to play and win the 5S game.</p> <p>This presentation when presented as a PowerPoint Slide Show provides a fun refresher of 5S knowledge when used as support for the 5<sup>th</sup> S – Sustain.</p>
5S Jeopardy Game	LeanMan 5S Jeopardy Game [Game file on the 5S Simulation Training Kit USB Drive and the 5S Game USB Drive]	<p>This presentation specifically focuses on the 5S elements as identified by Taiichi Ono as part of the Toyota Production System. Each 5S step is defined and described in practical terms. Following this is a Jeopardy-like game board with 5 categories and 5 levels of points for each category. Participants select their category and points, and the "answer" is shown. The participant then states the "question."</p> <p>There are many ways to play the game. The typical method is to put all contestants' names into a box and as each name is drawn, he or she selects and answers the question to win a prize. Use your imagination to create a fun experience as participants see and associate the 5-S terms with their meaning.</p> <p>The take-away is a full understanding of the 5 S terms and the differences between them. Once the team can recite the terms, they are ready for the next level of 5S training.</p>

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
Who Wants to Learn Lean – 5S	LeanMan Who Wants to Learn Lean – 5S [Game file on the 5S Simulation Training Kit USB Drive and the 5S Game USB Drive]	<p>This presentation takes the training provided in the 5S Defined refresher presentation puts the team through the paces as they test their knowledge. The Who Wants to Be a Millionaire-like game with 15 questions challenges the skills while reinforcing the underlying elements of 5S. Three versions of the game are included which present the questions in unique sequence so contestants can't memorize the pattern.</p> <p>This game makes a fun test of knowledge when used as support for the 5<sup>th</sup> S – Sustain.</p>
The 14 Philosophies of the Toyoda Family	LeanMan 14 Philosophies behind TPS [Bonus file on the Deluxe Kit <b>or</b> Deluxe Plus USB Drive]	<p>With full understanding comes acceptance. This presentation provides some ideas on how lean evolved with the Toyoda family and subsequent members of the Toyota Motor Company as the roots of lean began to shape what eventually became to be called Lean Mfg.</p>
The ToyodaWay Jeopardy Game	LeanMan ToyodaWay Jeopardy Game [Game file on the ToyodaWay Game Set USB Drive]	<p>This presentation specifically focuses on the 14 management principles that form the foundation of the Toyota Production System. Each principle is defined and described in practical terms. Following this is a Jeopardy-like game board with 5 categories and 5 levels of points for each category. Participants select their category and points, and the "answer" is shown. The participant then states the "question."</p> <p>There are many ways to play the game. The typical method is to put all contestants' names into a box and as each name is drawn, he or she selects and answers the question to win a prize. Use your imagination to create a fun experience as participants see and associate the TPS terms with their meaning.</p> <p>The take-away is a full understanding of the TPS terms and the differences between them. Once the team can recite the terms, they are ready for the next level of lean training.</p>
Who Wants to Learn Lean – The ToyodaWay	LeanMan Who Wants to Learn Lean – The ToyodaWay [Game file on the ToyodaWay Game Set USB Drive]	<p>This presentation takes the training provided in the TPS Defined refresher presentation and the ToyodaWay Jeopardy game and puts the team through the paces as they test their knowledge. The Who Wants to Be a Millionaire-like game with 15 questions challenges the skills while reinforcing the underlying elements of TPS. Three versions of the game are included which present the questions in unique sequence so contestants can't memorize the pattern.</p> <p>This game makes a fun test of knowledge when used as support for the TPS Car Factory Simulation.</p>
TPS Car Simulation	TPS Car Simulation [Presentation and simulation included on the Deluxe Kit <b>or</b> Deluxe Plus USB Drive]	<p>This implementation of the Toyota Production System training takes a slightly different focus to lean concepts than the Standard Car Factory simulation. In this exercise, attention is given to the support functions found in a factory, such as fixtures and totes, material kits, material conveyance, process and cross training, and workload balance.</p> <p>Lean flow is developed over five simulation steps, each applying attention to the process of trying continuous improvement, measuring results, and trying again. The simulation event is spaced over several tables and greater distances are used to simulate real factory communication conditions.</p> <p>Financial metrics for the simulation track progress as earned value steadily improves with each lean redesign.</p>

## 2019 Product Catalog

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
VSM Loop Simulation	VSM Loop Simulation Facilitator Guide [Presentation and simulation included on the Deluxe Plus VSM Package USB Drive and on the VSM Upgrade USB Drive]	<p>Implementing Lean Mfg. at random point processes does little to improve the bottom line financial metrics. You end up with islands of perfection surrounded by a sea of chaos.</p> <p>True lean enterprise focuses on the value stream from door-to-door and assures smooth flow of information and material all along the way. It does little to balance flow through an assembly process to only have finished goods build up waiting for paperwork from sales.</p> <p>The nine VSM exercises simulate a complete value stream from customer to order entry to supplied material to production build and to delivery to the customer. As each point along the stream is improved, bottom line metrics keep the true impact visible. Only when the entire stream has been redesigned with true customer-demand pull are production velocity, quality and efficiency maximized and waste eliminated.</p> <p>The value stream map for each of the nine flow methods is provided, along with additional lean tools used during the lean redesign events.</p> <p>The series of events are designed to run for extended lengths of time, with materials flowing in a complete loop from raw materials through the production process and delivery and back to raw materials. Thus, the event can be used in extended training sessions where the facilitator can focus on each lean concept and have enough time to experiment with the various influences on flow, the use of kaizen and continuous improvement tools, and bring in additional concepts of Heijunka planning, supply chain and customer pull Kanban signal techniques, and inventory management.</p>
VSMgt – Value Stream Management	VSMgt USB Drive	<p>This simulation exercise is an alternative to the larger and more complex VSM Loop simulation. It uses just one Car Factory kit of materials and presents a value stream for customer service using a door-to-door look at the paperwork forms, decision processes, and hands-on repair of customer returns.</p> <p>All materials for the simulation event are contained on the USB Drive. The forms and flow may be printed and used as is, or a variety of customizations may be edited to provide the trainer with realistic flow situations from their own experience.</p> <p>Plan on at least one hour of pre-event prep time to configure the “customer returns” and print the forms. The two step event requires at least two hours.</p>

## 2019 Product Catalog

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
<p>Kanban – Full Value Stream Simulation</p>	<p>Kanban Simulation [Presentation and simulation included on the Deluxe Plus Kanban Package USB Drive or on the Kanban Upgrade USB Drive]</p>	<p>This full value stream simulation presents a car showroom to the random customer base, which as each car is selected the Kanban rules cause a replenishment pull from the car warehouse and ultimately from the factory and from the raw materials suppliers. Heijunka is presented as a method of leveling the factory in this random demand mixed model simulation exercise.</p> <p>All materials are presented in the Deluxe <i>Plus</i> Kanban package, or if you own a car factory kit – the Kanban Upgrade kit adds just the extra materials necessary for the full simulation experience.</p> <p>The simulation exercise is designed to provide the ability to focus on any aspect of the value stream – like train the planning and scheduling members of the team to deal with random demand, or teach work cell operators to understand the entire lean flow methods. The team set up is variable but works best with 10 people.</p> <p>The facilitator guide includes a printed and bound color guide book and PowerPoint presentation which provides a complete discussion of the Kanban control methods. The Facilitator guide lists things to observe and point out to the people, comments to add for clarity, and suggestions for improvement.</p>
<p>Optional Training Event</p> <p>LM Large Group Simulation (5 to 39 hands-on participants) is a fast paced 4-step simulation that focuses on the 8-wastes.</p>	<p>LeanMan Large Group Simulation [file set on the LM Large Group Simulation USB Drive]</p>	<p>This 4-step simulation is designed to train large, but variable sized, groups of participants in the four main flow methods. The Evolution of Lean presentation (available on the Deluxe USB Drive) begins the event and a few additional presentation materials, such as Learning to See the Waste, are recommended but require additional time.</p> <p>The team set up is variable between 5 and 13 people each with hands-on participation for each Car Factory Kit used. The 84-page facilitator guide allows up to three Car Factory Kits to be run simultaneously for a maximum of 39 participants with hands-on time accommodated.</p> <p>A single facilitator can easily control the teams, provided the participant placemats located on the USB Drive are printed and distributed. The simulation includes a printed and bound color 84-page facilitator guide which provides lists of things to observe and point out to the people, comments to add for clarity, and suggestions for improvement.</p> <p>Requires one Deluxe Kit minimum, and can support up to two additional Companion Kits, or one Deluxe Plus VSM Package and one Companion Kit. Event time 2.5 hours plus additional presentation time, if any. Room size should be large training room or conference center.</p> <p>This presentation event is available for purchase only to clients who also purchase (or have purchased in the past) the LeanMan Car Factory Kits. Materials include the color printed and bound Facilitator Guide, two 450 pc dispenser packs of detail components, and all supporting files on USB Drive.</p>

## 2019 Product Catalog

Lean Concept Training Sequence	LeanMan Lean Presentation or Simulation Product	Learning Experience
LM Heijunka Simulation	<p>Heijunka Simulation Facilitator Guide [Presentation and simulation included on the Deluxe Plus Heijunka Package USB Drive, or the optional add on Heijunka Upgrade Package]</p> <p>NOTE: Heijunka training should follow the standard lean training on the five principles of lean using the car factory simulations. Heijunka will then enhance the understanding of flow by bringing into the simulation mixed model scheduling techniques.</p>	<p>This presentation event is part of the Deluxe <i>Plus</i> Heijunka Training Package, or it can be obtained as an optional purchase for use with the standard Deluxe and Deluxe <i>Plus</i> VSM Car Factory Kits. The "Leveling the Waves" presentation presents an alternate way of approaching the function of master scheduling and planning for a lean manufacturing environment.</p> <p>Creating a smooth level work flow out of the chaotic and random customer demand is a challenge in a lean shop, and requires a managed disconnect from the MRP push. The Heijunka simulation exercise develops a unique approach to visualization of work flow, allowing the planning function to gain control over capacity issues and assure on-time delivery in a mixed-mode production work cell.</p> <p>The simulation exercise is designed to train the planning and scheduling members of the team, but is also an excellent tool to teach work cell operators lean flow methods. The team set up is variable but works best with 10 people. The facilitator guide includes a printed and bound color 48-page guide book and PowerPoint presentation which provides a complete discussion of the Heijunka control methods and includes animated visual simulations of the Heijunka flow in the PowerPoint slideshow. The Facilitator guide lists things to observe and point out to the people, comments to add for clarity, and suggestions for improvement.</p> <p>Requires one Deluxe <i>Plus</i> Heijunka Package, or the Heijunka Upgrade Package.</p> <p>Event time is approximately 2 hours for the slideshow presentation and simulation, but allow additional time to experiment with alternate flows. Room size should be a training room or large conference room with at least three tables and room for 12 people.</p> <p>Materials include the color printed and bound Facilitator Guide, a 6x6 Heijunka Box, 16 Heijunka Kanban cards, 16 Job Ticket order cards, two 450 pc dispenser packs of detail components, and all supporting files on USB Drive, plus all of the standard simulation materials included with the standard Deluxe Kit. All materials are packaged in a single double deep container for easy transport and setup.</p>

... and many more. Since 2004, The LeanMan LLC has sold to Colleges, Consultants, Manufacturing, Health Care Centers, and many other customers who just wish to control a process, in over 27 countries around the world!

## About The LeanMan

The LeanMan Car Factory Simulation Training Kits are designed to help teach the principles of Lean Manufacturing to executives, managers, engineers, schedulers, supervisors and shop workers. They will provide your Continuous Improvement Training Coordinator with a simple kit of reusable parts easily configured to simulate various production-flow models. While some flow models are included with the kit to get you started, the intent is to provide a kit easily configured to simulate your actual product flow, making your training exercises more meaningful to your employees.

Each kit design has been carefully crafted to include elements of skill, manual dexterity, a positive learning curve, a focus on the learn-do-teach adult learning methods, and above all, an emotional element of fun that makes the lean principles stick.

The combination of realism in the simulation, repeatable metrics, and a touch of behavioral science all packaged in a simple easy to transport package makes the LeanMan simulations the natural choice for colleges, consultants, and lean practitioners everywhere. The LeanMan Products are sold in over 27 countries around the world and have been praised for their simplicity of design yet highly detailed lean flow scenarios that flow from beginner to the experienced lean practitioner.

The LeanMan, LLC offices are located near Grand Rapids, MI. To contact The LeanMan, LLC, please use the form on the [Contact](#) page, or send correspondence to:

The LeanMan, LLC  
6638 Pleasant Hill Drive S.W.  
Byron Center, MI 49315
